In the years since its first publication, Paxinos and Franklin's the Mouse Brain in Stereotaxic Coordinates has received virtually universal acceptance in neuroscience as the authoritative source for stereotaxic coordinates and delineations. This atlas is constructed in the style of The Rat Brain in Stereotaxic Coordinates, the most cited publication in neuroscience. The completely revised and updated 4e of Paxinos and Franklin's the Mouse Brain in Stereotaxic Coordinates features high-quality color plates scanned by the renowned microscopy unit of the Allen Institute for Brain Science. Constructed by the leaders in neuroanatomical atlas development, the new edition will maintain the position of the atlas as an indispensable resource for scientists working on the mouse brain. 100 coronal diagrams and accompanying photographic plates spaced at 120-m intervals; diagrams completely revised32 sagittal diagrams and accompanying photographic plates; diagrams completely revised30 horizontal diagrams and accompanying photographic plates; diagrams completely revisedThe most accurate and widely used stereotaxic coordinate systemNomenclature and abbreviations harmonized with the atlases of the brains of the rat, chick, marmoset, rhesus and humanElectronic diagrams available to purchasers of this book via a password-protected website
